

Solutions and Services for High Risk Emerging Markets

MetroLink Solutions, Inc. provides a wide variety of security and telecom applications, products and services at cost-effective prices. The company provides sophisticated security technology supporting a wide variety of perimeter, facility and personnel safety solutions in high-risk situations, as well as advanced telecommunications products and applications designed to bring world-class voice, data and video services to remote and rural areas of emerging markets worldwide.

MetroLink has formed strategic alliances with some of the world's leading providers of proprietary security and telecom applications, products and services. These unique partnerships are focused on supporting critical end-user requirements including:

- Insuring the safety of personnel in hostile and high-risk environments
- Safeguarding critical facilities
- Tracking the whereabouts of assets on a world-wide basis
- Monitoring the movement of personnel and vehicles
- Providing advanced Internet and voice services in remote and rural locations.

Many of MetroLink's products and services were originally designed for use by the Department of Defense, and are in use by security agencies and telecom companies around the globe.

MetroLink works closely with in-country partners in designing, deploying and operating a wide selection of sophisticated security and telecommunications systems. MetroLink's unique 'holistic' approach to supporting a client's needs covers a full range of services including:

- Threat assessments
- Ascertainment of needs
- System design
- Equipment installation
- Personnel training
- Operations and maintenance support.

Technology-Based Security Solutions & Services

We live in an era where the safety of personnel, the security of facilities, and the protection of assets have come under increasing threat from the forces of terrorism and criminal elements. As such, facilities and perimeters are penetrated more frequently, property is stolen at a record rate, and people face threats to their personal safety much more than ever before.

In response to this situation, MetroLink provides the highest quality safety and security solutions, in high-risk emerging markets, at cost-effective prices. MetroLink provides high-technology security and safety-related products, applications and services for 'at-risk' customers worldwide. MetroLink's service offerings cover the critical areas of providing high-end security hardware that monitors the status of personnel to ensure their safety in potentially hostile situations; deploying systems that prevent the intrusion of unauthorized personnel into critical facilities or perimeters; and supporting technology for the tracking, location and retrieval of high-value assets and vehicles on a worldwide basis. Many of MetroLink's products and services were originally designed for use by the Department of Defense, and are in use by security agencies around the globe. Military versions of a number of these systems are in use today, supporting critical applications in hostile environments around the world.

MetroLink acquires, develops and deploys advanced security-technology products, applications and services for military, homeland security agencies, public safety, energy companies, seaports and transportation companies. The development of innovative products and applications that contain a high degree of intellectual property rights (IPR) is a formidable task for a small company. For this reason, MetroLink has teamed with some of the leading security equipment manufacturers and software developers to jointly produce products and applications that are focused on meeting its client's needs.

MetroLink's security-technology partners have a long history of developing software and products for use in critical security applications worldwide. A number of these products and software-based applications have been adapted exclusively to meet MetroLink's unique requirements. This allows MetroLink access to technology that would normally cost the company millions of dollars in research and development costs. The result of this cost savings is passed on the MetroLink's clients, making the company's approach to high-end security solutions one of the most cost-effective options available today.

MetroLink security technology products and services include:

- **'SITE MAST-R'** - a self-contained video surveillance and communications system designed as a project management tool, or for video surveillance and communications applications in remote and potentially hostile environments. SITE MAST-R can be powered by a number of alternative powering options, and can be transported by helicopter or cargo plane.
- **'QwikCom'** - a rapid response telecommunications restoration system designed to re-establish communications over a wide area in the event of man-made or natural disasters. QwikCom offers a variety of voice, video and data options including Wi-Fi, VoIP and high-resolution video.
- **'QwikCamp'** rapidly deployed secure man-camps and command centers that include a wide variety of life-support options including; alternate power, water filtration, advanced telecommunications and security. QwikCamp can be deployed for both short duration and long-term stays in hostile environments.
- **'CSU'** - a completely self-contained central service unit designed for rapid deployment in situations where a source of reliable power, fresh water filtration, waste treatment and advanced telecommunications is required.

- **'MIDI-Stake'** - a 'portable' perimeter security system that can be rapidly deployed to cover a wide area and provide a variety of security and video surveillance options.
- **'SMART Pole'** - an advanced self-contained video surveillance and perimeter protection system that is rapidly installed, providing reliable wide-area coverage for sensitive facilities.
- **'TraceGEO'** - a line of security products and services designed for the security and safety of personnel, monitoring of facilities and the tracking and location of assets worldwide.

MetroLink Security Support Services

In addition to MetroLink's portfolio of technology-based security products, applications and services the company, in association with its protective security partners, also offers an extensive selection of support services including:

- Security consulting
- Threat assessment
- Security training
- Critical infrastructure and facility protection
- Disaster recovery

MetroLink can bring to bear the internal resources of its third-party security services partners, and that of its highly qualified strategic partners, to work with its clients to provide a comprehensive assessment of real and perceived potential security threats.

In addition, MetroLink third-party security partners can provide some of the most comprehensive security training available in the areas of:

- Personal protection
- Perimeter and facility guard training
- Counter terrorism
- Counter insurgency techniques
- Drug interdiction training

MetroLink's Security Support Services partners are:

- Highly-trained professionals with years of military special operations and security experience.
- Specially trained in threat analysis, interpretation of local conditions, and identifying and analyzing the profiles of potential adversaries.
- Experienced in identifying the nature and magnitude of threats that may exist in a facility, perimeter or border security situation.

About MetroLink Solutions

MetroLink Solutions, Inc. provides a wide variety of telecommunications applications, products and support services designed to bring world-class voice, data and video services, for education, healthcare and community development, to remote and rural areas of emerging markets worldwide. MetroLink also provides sophisticated security technology supporting a wide variety of perimeter, facility and personnel safety solutions in high-risk situations. MetroLink has formed strategic alliances with leading providers of protective security services, proprietary applications and advanced security hardware. These unique alliances are focused on ensuring the safety of personnel, safeguarding critical facilities, tracking the whereabouts of assets and monitoring the movement of vehicles in hostile and high-risk environments.

Many of MetroLink's security products and services were originally designed for use by the Department of Defense, and are in use by security agencies around the globe. Military versions of a number of these systems are in use today, supporting critical applications in hostile environments around the world.
